Professional Summary

Front-end Developer and Data Analytics enthusiast pursuing a Bachelor's degree in Artificial Intelligence and Data Science (AI & DS) at K.R. Mangalam University. Skilled in HTML, CSS, JavaScript, React.js, Node.js, Python, Power BI, and Figma. Passionate about building responsive web applications and transforming data into meaningful insights.

Experienced in Python, Object-Oriented Programming (OOP), Power BI dashboards, and modern front-end development. Focused on solving real-world problems through data analysis, design thinking, and interactive web technologies.

Technical Skills

Programming: Python, JavaScript

Web Development: HTML5, CSS3, React.js, Node.js, Responsive Design, DOM Manipulation, API Integration, REST APIs

Data Analytics: Power BI, Data Visualization, Matplotlib

Tools/Frameworks: Git Version Control, GitHub, Figma, UI/UX Design, VS Code, Netlify, Vercel

Other Skills: MS Office, MS Excel (Advanced), MS Word, MS PowerPoint, Canva, Market Research

Projects

Glass Dash Admin Dashboard

Technologies: React, Tailwind CSS, ContextAPI, Figma, Netlify

- Developed an interactive glassmorphism-style admin dashboard for efficient data management and monitoring.
- Implemented dynamic UI components using React and JavaScript for real-time updates and smooth user interactions.
- Designed a clean and responsive interface using HTML, CSS, and Figma, improving UI responsiveness by 40%.
- Deployed the project on Netlify for fast and reliable access.

LiveDemo: glassdash-admin-dashboard.netlify.app

Meteo Pulse Weather Tracker

Technologies: HTML, CSS, JavaScript, OpenWeather API

- Built a weather tracking web application that fetches real-time weather data using asynchronous JavaScript and APIs.
- Designed responsive user interface using HTML and CSS to present weather data clearly.
- Implemented dynamic DOM updates to display location-based weather details.

Crowd AQI

Technologies: Python, Flask, SQLite, HTML5, CSS3, JavaScript, Pandas, Matplotlib, REST APIs, WAQI API

- Built a full-stack AQI monitoring web app using Python, Flask, SQLite, HTML, CSS, and JavaScript.
- Integrated WAQI API and Geolocation for real-time air quality tracking.
- Designed dynamic AQI-based UI with interactive reporting and health recommendations.
